PROFESSIONAL SUMMARY

Computer Science and Engineering graduate (AI & ML) who builds web applications and backend services with Python, FastAPI, Django, React.js and SQL databases. Built projects covering AI-assisted note summaries, e-commerce workflows and wallet transactions. Hands-on with REST APIs, authentication, database operations, request validation, API testing, Docker and deployment.

TECHNICAL SKILLS

Programming: Python, JavaScript, Java (Basic)
Backend: FastAPI, Django, Django REST Framework, REST APIs, SQLAlchemy
Frontend: React.js,Html,CSS
Databases: PostgreSQL, MySQL, SQLite
Testing: Pytest, unit testing, integration testing, API testing, Postman
Tools: Git, GitHub, Docker, Render
Core: Data Structures & Algorithms, OOP, DBMS, authentication, authorization, debugging

PROJECTS

NOTE AI PRO | AI-Powered Notes Application
Tech Stack: *Python, FastAPI, React.js, PostgreSQL, SQLAlchemy*

- Developed an AI-powered notes management platform integrating intelligent content generation and summarization, reducing manual note-taking effort by **up to 50%**.
- Implemented one-click AI summarization to extract key insights from lengthy notes, reducing information review time by **up to 70%**.
- Integrated AI-powered content processing to transform unstructured text into concise, organized notes, improving information accessibility and productivity.
- Engineered **10+ REST API endpoints** using FastAPI with request validation, structured responses, and centralized exception handling.
- Designed relational database models and implemented ORM-based CRUD operations using SQLAlchemy and PostgreSQL across **4+ core entities**.

FULL-STACK E-COMMERCE PLATFORM
Tech Stack: *Python, FastAPI, JavaScript, PostgreSQL, SQLAlchemy, REST APIs*

- Developed a full-stack e-commerce platform with product listings, shopping cart management, and checkout workflows, simplifying the end-to-end online purchasing process.
- Implemented product search and filtering functionality, enabling users to efficiently discover relevant products based on their search criteria.
- Developed cart and checkout APIs to manage cart operations, validate orders, and streamline the purchasing workflow.
- Designed relational PostgreSQL schemas and ORM-based operations for user accounts, product catalogs, orders, and transaction records.
- Implemented request validation, structured HTTP error handling, and consistent API responses to improve transaction reliability and backend maintainability.

PAYNOW | UPI-STYLE DIGITAL PAYMENT APPLICATION
Tech Stack: *Python, Django, Django REST Framework, SQLite, Postman*

- Developed a UPI-inspired digital payment application featuring user authentication, wallet management, and peer-to-peer transaction workflows.
- Implemented wallet balance transfers with database integrity checks and transaction validation to prevent invalid payment requests and inconsistent wallet updates.
- Designed REST APIs for authentication, balance inquiries, fund transfers, and transaction history, streamlining digital payment operations.
- Implemented structured exception handling and centralized application logging to improve error traceability and backend debugging.
- Validated **15+ API test scenarios** using Postman, covering authentication, successful transfers, insufficient balances, and invalid transaction requests

EDUCATION

B.Tech, Computer Science and Engineering (AI & ML) — RISE Prakasam Group of Institutions | 2025 | CGPA: 7.73/10

CERTIFICATIONS & ACHIEVEMENTS

HackerRank Software Engineer Certification | Django Master Class — Udemy | Google AI Essentials | Python Programming — SkillUp | Artificial Intelligence — Skill Dezire

Solved 100+ Data Structures and Algorithms problems on LeetCode and HackerRank; built 3 working full-stack applications.
